

CXM-303: Deploying Enterprise Mobility Solutions with Citrix XenMobile

Course Overview

This course provides the skills necessary to install, configure, and integrate components in a Citrix XenMobile 10 Enterprise solution. Students with limited or no XenMobile experience will gain an understanding of the components of a XenMobile Enterprise solution and their functions. Students will deploy and configure the XenMobile Enterprise components, apply principles to enroll mobile devices, install mobile apps, and use policies to manage device and application usage in a lab environment. In addition, topics such as how to integrate additional Citrix products and applications as part of the solution and how to troubleshoot some of the most common implementation issues will be discussed. Students are expected to leverage their own mobile device (personal or corporate-owned, not already enrolled in another Mobile Device Management solution) to use during hands-on lab exercises.

Audience

This course is designed for IT professionals, systems engineers, server administrators, and Citrix Partners who need to know how to deploy a XenMobile Enterprise solution.

Instructional Method

This course is offered in instructor-led (ILT) format with demonstrations and application of concepts through hands-on exercises in a live lab environment.

Preparatory Recommendations

Citrix recommends that students bring a mobile device (iPhone, Android or Windows device) to complete device enrollment and Worx-related exercises. This device should not be enrolled in another MDM solution, or would need to be unenrolled in order to use it to complete the mobile device-specific class exercises.
